Table of Contents

1. About the System	Purpose, scope, and module relationships
2. Getting Started	Sign in, navigation, profile, sign out, and notifications
3. Roles and Responsibilities	Role descriptions and general permission boundaries
4. Shared Features	Dashboard, profile, pagination, filtering, PDF downloads
5. Module 1	Outreach Programs, Projects, and Accomplishment Records
6. Module 2	Community Needs Assessment
7. Module 3	Community Engagement Profiles
8. Module 4	Application templates, project proposals, approvals, and implementation readiness
9. Administration and Audit Trail	Users, colleges, roles, monitoring, and accountability
10. End-to-End System Flow	How information moves between modules
11. Common Tasks by Role	Practical role-based checklists
12. Troubleshooting and Good Practices	Common issues, limitations, and safe usage
13. Glossary	Important system terms and abbreviations

1. About the System

The PLP Community Outreach Management System is a centralized platform for planning, documenting, reviewing, and reporting the university's community extension work. It connects community needs, outreach initiatives, individual participation, project applications, approvals, and institutional monitoring in one role-controlled system.

1.1 Main objectives

- Maintain reliable records of communities, programs, projects, accomplishments, participants, and proposals.
- Base extension project applications on validated community needs.
- Use centrally managed, versioned application, implementation, and monitoring forms instead of hard-coded proposal fields.
- Give each qualified user an individual, verified community engagement portfolio.
- Support multi-level review, accountability, reporting, accreditation, and institutional evaluation.
- Protect sensitive operations through authentication, server-side authorization, rate limits, audit logs, and scoped data access.

1.2 The four modules

Module	Purpose	Main outputs
Module 1: Outreach Management	Maintains outreach program categories, operational projects, and accomplishment records.	Program catalog, project records, execution and impact data.
Module 2: Community Needs Assessment	Registers communities, designs surveys, records responses, ranks needs, and validates priority needs.	Submitted assessments and validated community needs.
Module 3: Community Engagement Profiles	Records verified participation by faculty, staff, students, and other authorized users.	Grouped engagement activities, service hours, analytics, and downloadable profile PDF.
Module 4: Project Applications	Creates need-based extension proposals through versioned application, implementation, and monitoring forms, then routes them through institutional approval.	Template responses, approved proposal, approval history, notifications, supporting files, and Notice to Proceed.

1.3 How the modules relate

Community Registration → Survey → Submitted Response → Priority Need Validation → Project Proposal → Multi-level Approval → Notice to Proceed → Outreach Implementation → Accomplishment Record → Engagement Profiles and Reports

- Module 2 supplies the validated need required by Module 4.
- Module 4 authorizes a proposed intervention and prepares it for implementation.
- Module 1 records operational programs, projects, and actual accomplishments.
- Module 3 records the people who participated and builds their verified portfolios.
- The Dashboard summarizes role-relevant data from the modules.
- The Audit Trail records successful write operations for accountability.

Important: Menu visibility is not the only security control. Laravel also checks roles, ownership, college scope, record status, and workflow stage. Typing a protected URL does not bypass authorization.

2. Getting Started

2.1 Signing in

1. Open the system URL in a supported web browser.
2. Enter the PLP account email and password assigned by an administrator.
3. Select **Sign in**.
4. The system loads the Dashboard and the sidebar options permitted for the account's role.

Repeated failed login attempts may be temporarily rate-limited. Contact an administrator if credentials are unknown or the account requires correction.

2.2 Main navigation

- **Top navigation:** sidebar toggle, Home, notification bell, fullscreen control, current user, profile, and sign out.
- **Settings:** administrative, outreach management, community assessment, and audit options available to the current role.
- **Project Applications:** need-based proposals are available to every authenticated role; record visibility and approval actions remain scope-controlled.
- **Project Application Templates:** Super Administrator and CALO Administrator maintain the versioned forms used by proposals under Settings.
- **Community Engagement:** engagement records and the user's own engagement profile.

The selected page is highlighted. Parent groups remain open when one of their child pages is active. On mobile devices, the sidebar closes after navigation.

2.3 Updating your profile

1. Select the user name or person icon in the upper-right corner.
2. Select **My Profile**.
3. Update permitted personal fields and save.
4. Use the password section to change the password. The current password is required.

Can: update personal profile details and password. **Cannot:** change personal role or college through the profile page. Those are controlled by authorized user managers.

2.4 Notifications

The bell icon shows unread workflow notifications, especially Module 4 proposal reviews and Notice to Proceed availability. Open a notification to mark it read and navigate toward the related feature. Use **Mark all read** to clear the unread count.

2.5 Signing out

Open the user menu and select **Sign out**. The active API session is revoked and the user returns to the login page. Always sign out on shared devices.

3. Roles and Responsibilities

One primary role is assigned to each account. A college-scoped role normally sees and manages information associated with its own college, while institutional roles may work across colleges.

Role	Description and typical responsibilities	Important limits
Super Administrator	System-wide administration, colleges, users, outreach, needs validation, engagement review, project-application template management, proposals, NTP, reports, and audit monitoring.	Cannot safely delete the currently signed-in account; actions remain audited.
CALO Administrator	Institutional CALO oversight; user and college administration; project-application template management; priority-need and engagement review; CALO Head proposal approval; NTP issuance; audit monitoring.	Does not create outreach programs under the current program policy; creator ownership and workflow stage rules still apply.
CALO Staff	Screens Module 4 proposals for completeness and compliance at the CALO Staff stage.	Cannot act before or after the assigned workflow stage; cannot issue NTP.

College Administrator	Manages users in the same college, communities, surveys/responses, outreach records, proposals, and grouped engagement participants within scope.	Cannot approve engagement records or view the audit trail; cannot manage other colleges' users.
Coordinator	Coordinates projects, may encode eligible project-roster engagements, and may submit project proposals.	Access depends on ownership, assignment, project membership, and project-roster rules.
Project Proponent	Creates/owns eligible outreach projects, encodes accomplishments and project-roster engagements, and submits need-based proposals.	Can normally edit only owned records in editable states; cannot approve own Module 4 proposal.
Faculty Extension Coordinator	Creates programs/projects, handles college assessment work, encodes accomplishments and engagements, and submits proposals.	Program edit/delete is limited to records the user created; college scope applies.
College/Department Head	Views same-college data and performs the Immediate Head/Dean notation step for Module 4 proposals.	Cannot act at later CALO, Academic Affairs, VPAA, or President stages.
Community Partner	Participates in community surveys, may access assigned/partner outreach information and engagement profile features, and may prepare a need-based proposal.	Cannot design surveys, manage application templates, validate needs, or approve institutional workflows.

External Evaluator	Views projects when assigned as an evaluator, can access engagement profile features, and may prepare a need-based proposal.	Cannot manage application templates or perform institutional approval stages.
Student/Volunteer	Views assigned projects and personal engagement profile and may prepare a need-based Module 4 proposal.	Cannot validate needs, manage application templates, or approve engagement/proposal workflow stages.
Alumni Partner	Views authorized project assignments and personal engagement information and may prepare a need-based proposal.	Cannot manage application templates, validate needs, or approve institutional workflows.
Monitoring and Evaluation Team	Monitors projects, surveys, priority needs, accomplishments, engagement analytics, approves/rejects submitted engagement records, and may prepare a need-based proposal.	Cannot access the audit trail, manage application templates, or perform Module 4 signatory stages.
Academic Affairs Officer	Reviews and endorses a Module 4 proposal at the Academic Affairs Officer stage.	Cannot act when another stage is current and cannot issue NTP.
Vice President for Academic Affairs	Reviews and endorses Module 4 proposals to the University President.	Cannot perform final presidential approval or issue NTP.
University President	Performs final approval of a Module 4 project proposal.	Cannot issue the CALO Notice to Proceed.

Project application access: every authenticated role may start and own a project proposal, including institutional users without an assigned college. This does not grant template administration, priority-need validation, or approval authority. Those

permissions remain role- and stage-specific.

3.1 General permission rules

- **View permission** does not automatically provide create, edit, delete, validate, or approve permission.
- **Ownership:** several records can only be edited or deleted by their creator.
- **College scope:** college administrators and similar roles generally operate within their assigned college.
- **Status:** submitted, approved, or completed records may be locked against editing.
- **Workflow stage:** Module 4 only allows the role assigned to the current stage to act.

4. Shared Features

4.1 Dashboard

The Dashboard is role-aware. It may show outreach project totals, verified engagements, verified service hours, survey responses, priority needs, accomplishments, communities, programs, project status summaries, pending engagement reviews, and recent records.

Counts follow the user's authorized data scope. A college user may see only relevant college or assigned records, while institutional administrators may see broader totals.

4.2 Search, filters, and pagination

- Use search fields for names, titles, identifiers, or descriptions supported by the page.
- Apply status, type, date, year, community, college, SDG, or module filters when available.
- Use pagination controls at the bottom of tables. Page totals are provided by the Laravel API.
- Reset filters when a record appears missing.

4.3 PDF downloads

- Blank survey forms can be downloaded from published survey templates.
- Verified engagement profiles can be downloaded as portfolio PDFs.
- Approved Module 4 proposals with an issued NTP can download the Notice to Proceed PDF.

PDF endpoints are rate-limited. Repeated rapid downloads may require waiting before trying again.

5. Module 1: Outreach Management

Module 1 maintains the operational structure and results of PLP outreach. It contains Outreach Programs, Outreach Projects, and Accomplishment Records.

5.1 Outreach Programs

An Outreach Program is a reusable institutional program category or framework. Fields include name, category, description, typical budget, typical duration, active status, and creator.

Who can access?

- **View:** Super Administrator, CALO Administrator, College Administrator, Faculty Extension Coordinator.
- **Create:** Super Administrator, College Administrator, Faculty Extension Coordinator.
- **Edit/Delete:** only the user who created the program.

Basic workflow

1. Open **Settings → Outreach Programs**.
2. Select **Add Program**.
3. Enter required information and save.
4. The creator's name appears in the table.
5. Edit or delete buttons appear only when the current user owns that record.

5.2 Outreach Projects

An Outreach Project is an operational initiative linked to an outreach program and college. It can capture title, description, objectives, location, schedule, proposed budget, expected beneficiaries, coordinator, members, community partners, evaluators, and status.

Who can do what?

- **Create:** Super Administrator, CALO Administrator, Project Proponent, Faculty Extension Coordinator.
- **View:** administrators; the creator; authorized same-college leaders; assigned members, evaluators, and community partners.
- **Edit:** administrators, or the owner while status is **Draft** or **Returned**.
- **Delete:** administrators, or the owner while status is **Draft**.

Cannot: an unassigned user cannot open another project's protected details merely by typing its URL. An owner cannot edit a locked project status unless the policy allows it.

5.3 Accomplishment Records

Accomplishment Records document actual outreach execution and results. They capture community, outreach program, college, budget used, volunteers, impact score, success rate, satisfaction rating, execution date, and creator.

- **View:** Super Administrator, CALO Administrator, College Administrator, Project Proponent, Faculty Extension Coordinator, College/Department Head, Monitoring and Evaluation Team.

- **Create:** Super Administrator, CALO Administrator, College Administrator, Project Proponent, Faculty Extension Coordinator.
- **Edit/Delete:** administrators, the creator, or a same-college College Administrator.

Accomplishments support dashboard reporting and provide evidence for actual program implementation. Engagement records may also reference an outreach project to document individual participation.

6. Module 2: Community Needs Assessment

Module 2 identifies and validates community needs. It is the required source of evidence for Module 4 proposals.

6.1 Communities

The community registry stores the location and identity of partner communities used by surveys, needs, accomplishments, engagement records, and proposals.

- **Manage communities:** Super Administrator, CALO Administrator, College Administrator.
- **Lookup/use communities:** selected outreach, assessment, partner, and monitoring roles.
- **Cannot:** users outside the community management group cannot create, edit, or delete community master records.

6.2 Survey Templates and Questions

A Survey Template defines an assessment instrument. Its questions may be organized by section and can use text, textarea, number, date, Boolean, select, radio, or checkbox response types.

- **Design templates/questions:** Super Administrator and CALO Administrator.
- **Statuses:** Draft, Published, Archived.
- **Download blank form:** authorized survey respondents can download a published template PDF.

Designer workflow

1. Create or edit the template.
2. Add questions, required flags, choices, section names, help text, and order.
3. Review before publishing.
4. Publish for field use or archive when retired.

6.3 Survey Responses

Authorized survey respondents can encode assessment data for a selected community and survey template.

- **Respondents:** Super Administrator, CALO Administrator, College Administrator, Faculty Extension Coordinator, Community Partner, Monitoring and Evaluation Team.
- **Draft:** can be saved and edited before submission.
- **Submitted:** becomes the source for priority-needs analysis.

Select Community + Template → Answer Questions → Record Priority Needs → Save Draft → Review → Submit

6.4 Priority Needs

Priority Needs are ranked concerns extracted from submitted surveys. Users can filter by community, need, rank, year, and month and view summary counts and average ranks.

- **View:** Super Administrator, CALO Administrator, College Administrator, Project Proponent, Faculty Extension Coordinator, College/Department Head, Community Partner, Monitoring and Evaluation Team.
- **Validate/Reject:** Super Administrator, CALO Administrator, Monitoring and Evaluation Team.
- **Validation result:** Validated needs become selectable in Module 4.

Critical rule: a project proposal cannot be submitted without an existing validated community need. Pending or rejected needs cannot be used to satisfy the Module 4 gate.

7. Module 3: Community Engagement Profiles

Module 3 records and verifies the community engagement contributions of PLP users. Each approved participant row contributes to that person's engagement portfolio.

7.1 Engagement records

An engagement activity includes a title, participants, engagement type, participation role, date, service hours, SDG alignment, description, source, optional outreach project/community, and workflow status.

When a College Administrator selects multiple participants, the system stores participant entries under one grouped activity. The table displays all participants as a list and paginates by activity rather than by participant row.

Who can access?

- **View engagement features:** all defined roles, subject to record-level scope.
- **Encode:** Super Administrator, CALO Administrator, College Administrator, Coordinator, Project Proponent, Faculty Extension Coordinator.
- **Approve/Reject submitted records:** Super Administrator, CALO Administrator, Monitoring and Evaluation Team.

Status workflow

Draft or Rejected → Edit Participants/Details → Submit → Submitted → Approve or Reject → Approved or Rejected		
Status	Meaning	What is allowed?
Draft	Still being prepared.	Authorized manager can edit, change participant checklist, delete, or submit.
Submitted	Waiting for validation.	Locked against ordinary editing; reviewer may approve or reject.
Approved	Verified institutional engagement.	Included in profile totals, service hours, analytics, and PDF.
Rejected	Returned with validation remarks.	Authorized manager can correct and resubmit.

Creating a grouped engagement

1. Open **Community Engagement → Engagement Records**.
2. Select **Add Record**.
3. For College Administrators, search and check one or more participants.
4. Enter activity information and choose Draft or Submit for Validation.
5. Save. Participants appear together under one activity.

Editing participants

1. Open an editable Draft or Rejected activity.
2. The checklist automatically marks current participants.
3. Check additional participants or uncheck removed participants.
4. Save. The system synchronizes additions/removals atomically and avoids duplicates.

7.2 Individual engagement profile

The profile shows verified activities, total engagements, service hours, filters, and portfolio information. Users can view their own profile; administrators and monitoring roles have broader access; college leaders may view users within their college.

- Only **Approved** records count as verified achievements.
- Use available filters such as year, SDG, engagement type, and other profile criteria.
- Select the PDF action to download a portfolio suitable for reporting or accreditation.

Can: download a verified portfolio. **Cannot:** make a Draft, Submitted, or Rejected activity appear as verified simply by viewing the profile.

8. Module 4: Community Extension Project Applications

Module 4 manages the proposal lifecycle from need-based draft through final approval and Notice to Proceed.

8.1 Who can access and apply?

- **Applicants:** every authenticated system role may create and own a project proposal.
- **Template managers:** Super Administrator and CALO Administrator.
- **Visibility:** applicant, same-college authorized users, and institutional users without college scope can view eligible proposals.

- **Approvers:** only the role assigned to the proposal's current workflow stage may record a decision.

8.2 Project Application Templates

Project Application Templates are versioned, schema-driven forms used inside the proposal modal. The system is initially seeded with three forms based on the official PLP documents:

Template	Phase	Purpose
Community Extension and Outreach Project Application Form	Application	Captures project information, need basis, overview, classification, strategic alignment, resources, budget, sustainability, risk, and monitoring information. This is the required proposal form.
Project Implementation Profile	Implementation	Records implementation details, reach, actual beneficiaries, budget expenditures, synopsis, accomplishment, measurable change, and supporting evidence.
Impact and Outcomes Monitoring & Evaluation Form	Monitoring	Records project reach, objective achievement, measurable outcomes, NPS, sustainability, overall impact, and recommendations.

Managing templates

1. Open **Settings → Project Application Templates**.
2. Select **Add Template**, or edit an existing record.
3. Enter the title, unique code, version, phase, status, required flag, and display order.
4. Use the visual builder to add sections and fields.
5. Choose each field type, label, key, help text, and required status.
6. For dropdown, single-choice, or multiple-choice fields, add the available options.
7. Reorder sections or fields using the arrow controls, then save.

Version protection: after a template has proposal responses, its code, version, phase, and form structure cannot be changed. Archive it and create a new version so historical responses remain readable and accurate.

Only **Published** templates appear as tabs in the proposal form. Draft templates remain under preparation; Archived templates are retained for history but are not offered for new responses.

8.3 Proposal contents and form tabs

- Selected community and its validated priority need
- Read-only validated needs and submitted survey findings for the selected community
- Suggested outreach programs, survey remarks, and question-and-answer evidence
- Published application-template tabs, with required fields indicated by an asterisk
- Application information including title, rationale, objectives, beneficiaries, outputs, outcomes, alignment, resources, partner involvement, risks, monitoring, sustainability, and budget
- Implementation and monitoring information captured in their corresponding lifecycle forms
- Supporting documents: MOA, letter, budget, workplan, or other accepted office files

8.4 Applicant workflow

1. Open **Project Applications**.
2. Select **Add Proposal**.
3. Select a community. The system shows its validated priority needs and submitted survey insights.
4. Select one validated community need. The proposal's stored community is derived from that need to prevent a mismatched relationship.
5. Review suggested outreach programs, remarks, and survey answers before designing the intervention.
6. Move through the form tabs and complete the required application fields. Other lifecycle tabs can be updated as implementation and monitoring data becomes available.
7. Save as Draft.
8. Open the proposal to upload supporting documents if required.
9. Select **Submit**. The proposal enters Immediate Head/Dean review.
10. If revision is requested, edit the proposal and submit again.

The applicant may edit or delete only an owned proposal in Draft or Revision Requested status.

8.5 Approval sequence

Order	Workflow step	Authorized role	Purpose
1	Immediate Head / Dean	College/Department Head from the proposal's college	Notation and college-level review
2	CALO Staff	CALO Staff	Completeness and compliance screening
3	CALO Head	CALO Administrator	First-level approval and endorsement
4	Academic Affairs Officer	Academic Affairs Officer	Additional Academic Affairs review
5	VPAA	Vice President for Academic Affairs	Endorsement to the President
6	President	University President	Final institutional approval

At each active stage, the assigned reviewer can:

- **Approve/Endorse:** advance to the next stage.
- **Request Revision:** return to the applicant for correction; remarks are required.
- **Reject:** end the review as rejected; remarks are required.

Cannot: a reviewer cannot approve out of sequence, approve while another role owns the current stage, or use a copied URL to bypass the stage policy.

8.6 Notice to Proceed

After presidential approval, the Super Administrator or CALO Administrator can issue the NTP. The proposal status becomes **NTP Issued**, the applicant receives a notification, and authorized viewers can download the NTP PDF.

8.7 Proposal statuses

Status	Description
Draft	Applicant is preparing the proposal.

Under Review	Proposal is at one of the six approval steps.
Revision Requested	Returned to applicant with remarks; editable and resubmittable.
Rejected	Review ended without approval.
Approved	President completed final approval; awaiting NTP.
NTP Issued	CALO issued implementation authorization.

9. Administration and Audit Trail

9.1 User management

- **Managers:** Super Administrator, CALO Administrator, College Administrator.
- Super and CALO administrators can manage users broadly.
- College Administrators can view, create, and update users within their own college.
- Only institutional administrators can delete another user; a user cannot delete the currently signed-in account.
- Role and college assignments must be maintained through authorized user management, not the personal profile page.

9.2 College management

Super Administrator and CALO Administrator maintain the college master list. Other users may use college data as permitted but cannot modify the master records.

9.3 Audit Trail monitoring

The Audit Trail is a read-only monitoring page available to Super Administrator and CALO Administrator through **Settings → Audit Trail**.

Information recorded

- Activity/action and module
- Person who performed the action, or System when no actor is available
- Date and time
- Route, HTTP method, IP address, request ID, and user agent
- Previous and submitted values when recorded

Using the page

1. Search by activity, user, IP address, or request ID.
2. Filter by module, action, start date, and end date.
3. Select **View** to inspect complete request context and value snapshots.
4. Use Refresh to load recent activity or Reset to clear filters.

Security: password, confirmation, current-password, token, and authorization fields are redacted by the audit service. Audit entries cannot be edited through the UI.

10. End-to-End System Flow

1. **Administration:** set up colleges, roles, users, and communities.
2. **Assessment preparation:** CALO designs and publishes a survey template and questions.
3. **Field assessment:** an authorized respondent selects a community, completes the survey, ranks needs, and submits it.
4. **Need review:** authorized reviewers validate or reject priority needs.
5. **Template preparation:** CALO maintains and publishes versioned application, implementation-profile, and impact-monitoring forms.
6. **Proposal preparation:** any authenticated applicant selects a community, reviews its validated needs and survey insights, selects a validated need, and completes the published application form.
7. **Approval:** the proposal follows Head/Dean → CALO Staff → CALO Head → Academic Affairs Officer → VPAA → President.
8. **Implementation authorization:** CALO issues the Notice to Proceed.
9. **Operational tracking:** authorized users maintain related programs and projects, while the proposal owner completes applicable implementation and monitoring form tabs.
10. **Accomplishment:** budget, volunteer, impact, success, satisfaction, and execution information is recorded.
11. **Individual engagement:** participant activities are encoded, submitted, and verified.
12. **Reporting:** dashboards, engagement profile PDFs, survey PDFs, NTP PDFs, and audit monitoring support evaluation and accreditation.

11. Common Tasks by Role

Role	Recommended working checklist
Super Administrator	Maintain colleges/users and project-application templates; review system access; validate needs; review engagements; monitor audit logs; support proposals/NTP; confirm dashboard data.
CALO Administrator	Administer accounts; design surveys and project-application templates; validate needs; perform CALO Head review; issue NTP after approval; review engagements; inspect audit trail.

College Administrator	Maintain same-college users; coordinate community data; conduct surveys; create accomplishments; encode grouped engagement participants; prepare proposals.
Faculty Extension Coordinator	Create/own programs; manage eligible projects; conduct assessments; encode accomplishments/engagements; prepare proposals.
Monitoring and Evaluation Team	Review assessments and priority needs; monitor accomplishments; approve/reject submitted engagement records; use analytics and dashboards.
Applicant (any authenticated role)	Select a community; review needs and survey insights; select a validated need; complete every required application-template field; upload evidence; submit; respond to revision remarks; monitor notifications; complete later lifecycle tabs when applicable.
Proposal Signatory	Open notifications; verify the current stage; review need, narratives, budget, documents, and prior approvals; approve, revise, or reject with appropriate remarks.
Faculty/Staff/Student Participant	Review personal engagement profile; report missing activities to an authorized encoder; download verified portfolio when needed.

12. Troubleshooting and Good Practices

Situation	What to check
A menu is missing	Confirm the account role. The sidebar intentionally hides features outside the role group.
Forbidden when opening a URL	The server rejected the role, scope, ownership, status, or workflow stage. Request the correct assignment; do not try to bypass it.
No need is available in a proposal	The need must come from a submitted assessment and have Validated status.

A project form tab is missing	Confirm that the corresponding application template is Published and active. Draft and Archived templates are not offered to applicants.
A template cannot be structurally edited	A template with saved proposal responses is version-protected. Create a new version so historical submissions retain their original field definitions.
A proposal reports missing template fields	Open each required form tab and complete all required fields. For selection fields, choose one of the configured options.
Cannot edit a record	Check ownership and status. Submitted/approved records are commonly locked.
Cannot approve a proposal	Confirm the proposal is Under Review and currently assigned to your exact workflow stage.
Engagement missing from profile total	Only Approved engagement records are verified and counted.
PDF download temporarily fails	Wait and retry; PDF endpoints are rate-limited. Also confirm authorization and that the required output exists.
Changes do not appear	Refresh the page, reset filters, and confirm the save request completed without validation errors.

12.1 Data-quality practices

- Search for an existing community, user, program, or project before creating another.
- Use clear activity and proposal titles.
- Verify dates, service hours, participant selections, budgets, and college assignment before submission.
- Write specific revision/rejection remarks so the record can be corrected.
- Upload only relevant, authorized, and safe supporting documents.
- Do not share passwords or leave sessions open on shared computers.

13. Glossary

Term	Meaning
------	---------

CALO	The university office responsible for community affairs/linkages/outreach administration in this workflow.
Community Need	A ranked concern identified through a community needs assessment.
Validated Need	A priority need approved by an authorized Module 2 reviewer and eligible for proposal linkage.
Project Application Template	A versioned, CALO-managed form definition used to collect proposal application, implementation-profile, or impact-monitoring information.
Template Response	The applicant's saved answers to a specific version of a project application template.
Template Phase	The lifecycle purpose of a form: application, implementation, or monitoring and evaluation.
Engagement Record	A user's participation in an outreach, extension, volunteerism, service-learning, training, or related activity.
MOV	Means of Verification or supporting evidence for an activity or proposal.
NTP	Notice to Proceed issued after final proposal approval.
RBAC	Role-Based Access Control: permissions based on the user's assigned role and contextual rules.
SDG	United Nations Sustainable Development Goal used for alignment and reporting.
VPAA	Vice President for Academic Affairs.
Audit Trail	Read-only record of successful system-changing requests and their context.

Version note: This manual documents the implemented Version 1 behavior as of October 8, 2026, including visual project-application template management and template-driven proposal forms. Permissions and workflows should be reviewed whenever roles, policies, routes, or institutional procedures change.
